**Subject:** Teleconference number & waste list

Mike,

Please send us the teleconference number for tomorrow afternoon, and when you notify the participants, please add Mike McGolden to your e-mail address: [mike@coaltecenergy.com](mailto:mike@coaltecenergy.com)

---

In the broader, national letter ruling, we would really appreciate it if you would list the following as potential feedstocks for our oxygen-starved gasification system:

**Carbon-rich wastes, including, but not limited to:**

Dairy cow manure  
Beef cattle manure  
Broiler litter  
Turkey litter  
Hog manure solids  
Duck manure  
Animal compost  
Egg layer manure  
Egg waste (e.g. at vaccine plants)  
Municipal and industrial sewage sludge  
Biosolids  
Wet distillers grain  
Brewers grain waste  
Food wastes and food processing wastes  
Bagasse  
Other cellulosic wastes (e.g. paper, cardboard, shredded railroad ties, shredded tree waste, compost, switch grass)  
Coffee waste  
Nut shell waste  
Tires

Regards,

Peter Thomas
